On the Heterocera fauna of Lower Aras Valley in NE Turkey (Lepidoptera)

Muhabbet Kemal ¹ Ahmet Ömer Koçak

Abstract: On the Heterocera fauna of Lower Aras Valley in NE Turkey (Lepidoptera). *Misc. Pap.* 186: 1-57, 21 figs, 26 maps.

This paper deals with the Heterocera fauna of Lower Aras Valley in NE Turkey. Totally 302 species of 24 families are listed alphabetically together with their synonyms and distributional information. Some faunistic and taxonomic remarks are added. The affinity of the faunal elements between Aras Valley and Central Asia is discussed.

Key words: Arctiidae, Cimeliidae, Coleophoridae, Cossidae, Ctenuchidae, Drepanidae, Ethmiidae, Gelechiidae, Geometridae, Lasiocampidae, Lemoniidae, Lymantriidae, Noctuidae, Notodontidae, Oecophoridae, Psychidae, Pterophoridae, Pyralidae, Saturniidae, Sphingidae, Thyatiridae, Tineidae, Tortricidae, Zygadenidae, Heterocera, fauna, Kars, İğdır, Aras, Turkey.

Aras valley gets its name from the river with the same name referred. The river flows along the Turkish –Armenian border, near Ağrı Mounts (**Fig. 1**) and it reaches the Caspian Sea along with Kura in Azerbaijan.

The Lepidoptera fauna of Aras Valley in Turkey has been the focus of attention of the authors since 1973. However, no research was carried out in a programmed manner for various reasons. Previous papers regarding the Lepidoptera of Aras Valley published by the authors are as follows: Kemal & Koçak, 2012, 2017, 2018, 2019; Koçak & Kemal, 2012; Koçak, 1977a, 1977b, 1979, 1980.

The Heterocera list of the species from the Lower Aras Valley given below is based upon the species recorded previously by the authors from the following places (with codes): Akçay 1100-1200m (36Db), Kağızman city 1400m (36Da) (Kağızman, Kars Province); Aralık DÜÇ 820-850m (76Ac) (Iğdır Province (76)), İğdir city 850m (76Ba), Kent ormani 960m (76Bb), Gaziler (=Kulp) 1075m (76Da), Gaziler 1100-1450m (76Dc), Gaziler 1700-1850m (76Dd), Tuzluca 1290m (76Dg). The studying area, the Lower Aras Valley in NE Turkey is between Kağızman (Kars Pr.) and Aralık (Iğdır Pr.) (**Map 1**).

Map 1 – Lower Aras Valley in NE Turkey. Yellow markings denote approximate studying localities.

Earlier publication on the Heterocera (Lepidoptera) of Lower Aras Valley belongs to Romanoff (1884-1887). Localities, like Kazıkoparan, Kulp, Aralık are relatively better investigated places by the Russian lepidopterists in the last decades of 19. Century. In the last Century, mostly European collectors focused in the diurnal Lepidoptera. As mentioned above, in the last decades, the authors realized short, private excursions at irregular intervals to the studying areas for the purpose of observing and collecting diurnal and nocturnal Lepidoptera.

Aras Valley is an important region, due to its geographic situation, rich biological diversity, as well as interesting faunal elements closely related especially with the Central Asiatic ones. *Amata caspia*, *Eriogaster neogena*, *Armada clio*, *Drasteria picta*, *Drasteria rada*, and *Epipsammia cretacea* may be exemplified for this purpose (**Maps 11-13, 24**). We are of the opinion that this will increase to a significant number, provided that successful field works can take place.

Finally, we find the Heterocera diversity in the Aras Valley valuable; therefore we give importance to research as soon as possible. Our choice of priority areas will be about the Heterocera fauna of the halophytic vegetation.

List of the species

Totally 302 species of 24 Heterocera families, based upon the Info-Systems of the Cesa², are listed below in alphabetical order, together with their synonyms and distributional information (as codes)³. With a few exceptions, all the species mentioned have been identified by the authors. The material and the photographs are preserved in the Cesa Collection and the Archive.

Sometimes, butterflies may visit light traps in summer. Among them, *Polyommatus agestis* was an example during night collecting of the authors in Aras Valley (**Fig. 2**).

Remarks: The status of Iraqi *Cerura* species was discussed by Wiltshire (1957: 54) under the title “*Cerura vinula* L. ssp (?) *intermedia* Teich” before the description of *irakana* Heydemann, Schulte & Remane, 1963 as a subspecies of *Cerura vinula* L. On the other hand, De Freina (1993: 87) identified Hakkari populations (SE Turkey) as “*Cerura vinula irakana*”. De Freina’s approach has prompted us to misjudge about the identity of *Cerura* species in SE Turkey. But, we follow here Schintlmeister’s (2008) opinion on the matter of *intermedia/irakana*.
